# Cloud Migration for a Leading Logistics Service Provider

Objectives

- To build modern, agile, lean, and resilient infrastructure that can match the client's time-critical delivery services.

- Accelerate Internal IT team's ability to respond to business needs

- "Cloud First" Strategy- Cloud as a Day 1 Tenet of the solution for the existing infrastructure and platform for future applications to be developed

- On demand DR and Business Continuity services

Solution

- Implemented Hybrid Cloud operating model – Infinite MCOD - Azure as an extension of existing DC across (EMEA & APAC)

- Production and DR on Azure for X86 workloads and Windows Azure and STORSIMPLE to alleviate storage concerns

- Over **200 TB of storage migrated to Cloud**

- Remote site consolidation

- Test & deployment of Azure Migration Accelerator (**Near-zero downtime and data loss**)

Benefits

- Moving to cloud resulted in consistent application performance & higher availability of services

- Target increased movement (**at least 70%**) to public cloud in a 3-year roadmap

- Smooth transition from on-premises resources to Azure with minimal disruption to the business

- Agile infrastructure that could scale out or back quickly as needed

- **Migrated over 60% of workloads** to the Azure Cloud

- Single Orchestration tool for the Hybrid model

- **Achieved over 97% virtualization** levels

- Built standard catalogue for operation easiness and reduced time to market
